

In the claims:

1. A modular disc brake comprising a brake mechanism (7) and modules in form of a frame (1), a house (2) and a cover (3) **characterized** in that the frame (1) has a recess (10) to receive the house (2).
2. The disc brake of claim 1, **characterized** in that the house (2) is mounted not to take up any load during braking, and/or that a lower part of the house (2) is received in the recess (10).
3. The disc brake of claim 2, **characterized** in that the house (2) is made of a plastic material.
4. The disc brake of any of the previous claims, **characterized** in that the brake mechanism (7) is a single pre-mounted unit received in the house (2).
5. The disc brake of any of the claims 1 to 3, **characterized** in that the brake mechanism (7) is pre-mounted in the house (2) or cover (3).
6. The disc brake of any of the previous claims, **characterized** in that the cover (3) is attached in such a way that it covers the end of the house (2).
7. The disc brake of any of the previous claims, **characterized** in that the house (2) is open in one direction to receive the brake mechanism (7); that it has one or more openings for connection of one or more thrust units of the brake mechanism (7) with one or more thrust plates (8); and that it has a space for receiving a lever of the brake mechanism (7).

8. The disc brake of any of the previous claims, **characterized** in that the frame (1) and cover (3) has openings (13, 14) to receive a number of pull rods (4), which pull rods (4) are clamped between the frame (1) and the cover (3) in that nuts (5) are received on one end of each pull rod (4) and that the pull rods (4) have a head at the other end.

9. The disc brake of any of the previous claims, **characterized** in that a gasket (6) is received between the house (2) and the cover (3).

10. The disc brake of claim 8 or 9, **characterized** in that the house (2) is pre-tensioned by means of the pull rods (4).
